Dear Corrie,

I would say that further ethical opinion is unnecessary. I am sorry I was not available for your call, but I am at a computer and if you have any further queries, just let me know (if you require a more formal response for instance).

Kind regards.
Tricia

Tricia

I need your sponsor advice...(tried calling but I believe you are working from home)

Attached is a project enquiry to ethics and response – to linkage Aberdeen Children of the 1950s cohort to health data to early life and childhood influences on the burden of disease. We have a very similar project, same datasets but focused specifically at education and its effect on the burden of disease. The research team is overlapping but includes new people and the lead is in Glasgow but Jess and I are Co-Is.

Do we need to ask ethics again or is the above sufficient for you to say no ethics needed? We will be applying to the ACONF steering committee and PBPP.
